Available Conduits into Northside

There are two conduits into Northside for telecommunications. One is used by the current fiber provider. The second is used by cable TV. Assume that both conduits will be filled and a new conduit will need to be created.

Northside conduit to server Room

The fiber will need to be ran from the mechanical room to the basement server room. A new conduit or fiber with a protective covering will need to be ran.

Conduit into new Central Office

The conduit and pull cable are available from the north side of the district office building. They will run into the mechanical room and

1. terminated there and patched into the server room on the other side of the wall.
2. continue into server room and terminated there.

A path from the mechanical room to server room has already been established.
